BLACK & DECKER AND iCONTROL NETWORKS PARTNER TO CREATE GROUND-BREAKING INTEGRATED ACCESS CONTROL SOLUTIONS

Partnership Announced at ISC West to Create the Ultimate in Residential Security and Home Management

LAS VEGAS, (April 1, 2009) – Black & Decker® and iControl Networks today announced their partnership to create the ultimate in integrated wireless and remote residential access control solutions at the International Security Conference and Exposition (ISC West) in Las Vegas. This collaboration of innovation leaders will allow homeowners to remotely and wirelessly control Z-Wave equipped Baldwin® and Kwikset® brand door locks with the iControl Stay Connected™ solution via any Web-enabled device. These innovative future solutions will be on display in the Black & Decker booth No. 2086 and the iControl booth No. 10141 at ISC West, April 1-3, 2009.

“This integrated solution is unique in that the Kwikset and Baldwin locks feature electronic motorized deadbolts which allow homeowners to not only monitor the status of their door locks remotely, but actually lock or unlock them directly from their Web-enabled mobile phone or the Internet without a person physically touching the hardware,” said Jason Williams, senior product manager, Black & Decker Hardware and

Home Improvement.

Remote access control is a key feature delivered by the iControl Stay Connected solution, the home management platform utilized by security companies to offer interactive services that extend the traditional security system feature set to include:

- **IP-Enabled Security** – broadband and cellular-based “always-on” network connectivity between the security system and central monitoring station.
- **Remote Management** – mobile and Web connectivity for personal monitoring and control of Kwikset and Baldwin brand door locks, security, lighting, video, energy access, and more.
- **Interactive Video** – live video and event-based video clips and pictures viewable via mobile phone or the Internet.
- **Real-time Notifications** – “Always connected” event-driven e-mail or text message notification with video clips and picture attachments.
- **Consumer Experience** – Attractive widget-based interfaces that are simple and easy-to-use.

“Home devices that used to function independently can now interoperate seamlessly via our open architecture, and deliver a much more compelling value proposition for homeowners,” said Greg Roberts, vice president of marketing, iControl Networks. “Not only can consumers remotely control locks from the Web or mobile phone, but unlocking your front door also automatically disarms your security system, turns on the lights, adjusts the thermostat and much more.”

About iControl Networks

Palo Alto, Calif.-based iControl Networks is a venture-backed software and services
